FINCHES					
__ American Goldfinch	O	-	R	U	AH
__ House Sparrow	R	-	-	-	Ru

Taxonomy follows *The Sibley Guide to Birds* by David Allen Sibley, 1st edition, sixth printing September 2001. Birders should note this order differs than that of the currently accepted phylogenetic order found in the American Ornithologists' Union's *Check-list Of North American Birds*, 7th edition, 1998 and subsequent supplements.

The checklist was last updated on 2-6-2007

KISSIMMEE PRAIRIE PRESERVE STATE PARK BIRD CHECKLIST

Kissimmee Prairie Preserve State Park (~54,000 acres) encompasses and protects the largest remaining tract of Florida dry prairie, a globally imperiled ecosystem that occurs only in Florida. Dry prairie is home to the largest remaining population of the Federally Endangered Florida grasshopper sparrow, as well as crested caracaras, burrowing owls, Florida scrub-jays, white-tailed kites and overwintering sparrows, warblers and birds of prey.

This checklist is compiled from confirmed observations within Kissimmee Prairie Preserve State Park and should be considered a work-in-progress. As the preserve is large and difficult to explore completely, we welcome the opportunity to provide information on up to date locations for various species. We also invite interested individuals and groups to join us and assist with bird related projects within the prairie. Contact the preserve office at 863/462-5360 for additional information.

We ask that you help us learn more about the birdlife in the preserve. Please report your sightings, especially those of previously undocumented species and unusual seasonal occurrences.

SEASONS

Spring (Sp)	Mar-May
Summer (Su)	Jun-Jul
Fall (F)	Aug-Nov
Winter (W)	Dec-Feb

STATUS IN PRESERVE

+	Known to breed in the preserve
*	Postulated breeding species, unconfirmed
BOLD	Species listed Endangered, Threatened or Special Concern

OCCURRENCE

C	Common Certain to be found in suitable habitat.
U	Uncommon Usually present; Not certain to be found.
O	Occasional Seen only a few times during a season.
R	Rare Not to be expected.
-	Does not occur/not documented for season

The likelihood of observing any particular species is dependent upon being in the proper habitat during the appropriate season.

HABITAT (HAB)

P	Prairie: Wiregrass and Palmetto.
H	Hammock: Hardwoods and Palms.
A	Aerial: Applies to birds seen mostly on the wing.
S	Slough or Riverine
W	Depression and Basin Marshes as well as wetter areas in prairie that aren't slough or riverine.
Ru	Ruderal: Disturbed areas such as pasture and roads.
